

Technical Information about 8-OH-2'-O-Me-cAMP

Update: January 19, 2021 HU

Abbreviation: 8-OH-2'-O-Me-cAMP

Formula	CAS No.	Molecular Weight	UV	BIOLOG Cat. No.
C ₁₁ H ₁₃ N ₅ O ₇ P·Na	[pending]	381.2	λ _{max} 268 nm / ε 11000 / pH 7	H 013

Name: 8- Hydroxy- 2'- O- methyladenosine- 3', 5'- cyclic monophosphate

Description: 8-OH-2'-O-Me-cAMP is an analogue of the natural signal molecule cyclic AMP in which the hydrogen in position 8 of the nucleobase is replaced by the polar hydroxy moiety. In addition, the ribose 2'-hydroxy group has been methylated.

Properties: 8-OH-2'-O-Me-cAMP is a specific activator of the exchange protein directly activated by cyclic AMP (Epac or cAMP-GEF) which does not activate protein kinase A. Due to its low lipophilicity and membrane permeability, 8-OH-2'-O-Me-cAMP can be used in patch clamp applications.

Specification: Crystallized or lyophilized sodium salt. Please keep in mind that equal concentrations of the compound may look different in volume due to high sensitivity of the lyophilized form to humidity. The compound can even contract to small volume droplets. Normally the product is located in the conical bottom of the tube. Micromolar quantities are determined by UV at λ_{max}.

Purity: Typical analysis is better than 98% (HPLC / UV / 268 nm). The product is not sterile and has not been tested for endotoxins.

Solubility: 8-OH-2'-O-Me-cAMP has good solubility in water or buffer. Please rinse tube walls carefully and preferably use ultrasonic or vortex to achieve total and uniform mixing. When opening the tube please make sure that no substance is lost within the cap.

Stability and Storage: 8-OH-2'-O-Me-cAMP is chemically rather stable and does not need special care during handling or shipment. Nevertheless, we recommend that the compound should be stored in the freezer, for longer storage periods preferably in freeze-dried form.

Toxicity and Safety: Since cyclic AMP has multiple tasks in every organism, it is possible that cAMP analogues will interfere with many cell regulation processes *in vivo*. However, due to the rather small quantities to work with no health hazards have been reported. Nevertheless please keep in mind that the *in vivo* properties of this compound are not sufficiently characterized up to now. Avoid skin contact or ingestion and allow only trained personnel to handle the product.

Our products are designed, developed and sold for research purposes only. They are intended for *in vitro* and nonhuman *in vivo* laboratory applications. Any other use requires approval of health authorities.

Not for drug, household or related uses!

Selected Reference for 8-OH-2'-O-Me-cAMP: 8-OH-2'-O-Me-cAMP is a new structure which has been synthesized by BIOLOG LSI for the first time. There are no references available at the moment.
