

## Technical Information about 5'-Amino-5'-deoxyguanosine

Update: April 22, 2024 ss

**Abbreviation:**

**5'-NH<sub>2</sub>-Guo**

Formula	CAS No.	Molecular Weight	UV	BIOLOG Cat. No.
C <sub>10</sub> H <sub>14</sub> N <sub>6</sub> O <sub>4</sub>	[4099-84-7]	282.3 (free base)	λ <sub>max</sub> 252 nm / ε 13500 / pH 7	A 078

**Name:** 5'- Amino- 5'- deoxyguanosine 5'-NH<sub>2</sub>-Guo

**Description:** 5'-NH<sub>2</sub>-Guo is an analogue of guanosine in which the ribose 5'-hydroxyl group is replaced by an amino group.

**Properties:** 5'-NH<sub>2</sub>-Guo can be used for receptor mapping studies or as starting material for *N*-phosphorylation reactions or the chemical introduction of reporter groups in 5'-position of the ribose.

**Specification:** Lyophilized or crystallized solid. Equal concentrations 5'-NH<sub>2</sub>-Guo can appear very different in volume depending on humidity. The compound can even contract to small volume droplets. Normally the product is located in the conical bottom of the tube. Micromolar quantities are determined by UV at λ<sub>max</sub>.

**Purity:** Typical analysis is better than 90% (HPLC / UV / 252 nm). The product is not sterile and has not been tested for endotoxins.

**Solubility:** 5'-NH<sub>2</sub>-Guo has limited solubility in water (approx. 2 mM), however, it is better soluble in 1:1 DMSO/water (≥ 10 mM) and DMSO (≥ 10 mM). Please rinse tube walls carefully and preferably use ultrasonic or vortex to achieve total and uniform mixing. When opening the tube please make sure that no substance is lost within the cap.

**Stability and Storage:** 5'-NH<sub>2</sub>-Guo is chemically rather stable and does not need special care during handling or shipment. Nevertheless, we recommend that the compound should be stored in the freezer, for longer storage periods preferably in freeze-dried form.

**Toxicity and Safety:** Since guanosine has multiple tasks in every organism, it is very likely that its analogues will interfere with many cell regulation processes *in vivo*. However, due to the rather small quantities to work with, no health hazards have been reported. Nevertheless please keep in mind, that the *in vivo* properties of this compound are not sufficiently characterized up to now. Avoid skin contact or ingestion and allow only trained personnel to handle the product.

Our products are designed, developed and sold for research purposes only! They are intended for *in vitro* and nonhuman *in vivo* laboratory applications. Any other use requires approval of health authorities.

**Not for drug, household or related uses!**
