

Technical Information about AA-UTP

Update: April 11, 2019 HU

Abbreviation:

AA-UTP

Formula	CAS No.	Molecular Weight	UV	BIOLOG Cat. No.
C ₁₂ H ₂₀ N ₃ O ₁₅ P ₃	[85280-66-6]	539.2 (free acid)	λ _{max} 290 nm / ε 8100 / pH 7	A 117

Name: 5- (3- Aminoallyl)uridine- 5'- O- triphosphate

Description: AA-UTP is an analogue of uridine-5'-O-triphosphate (UTP) in which the hydrogen in position 5 of the uracil nucleobase is replaced by an aminoallyl group.

Properties: AA-UTP can be used as a ligand for affinity chromatography and is also suitable for modification with fluorophores and other markers.

Specification: Aqueous solution of the sodium salt (10 mM, pH 7.6). Other salt forms of AA-UTP are available upon request. Micromolar quantities are determined by UV at λ_{max}. When opening the tube please make sure that no liquid is lost within the cap. A short spin-down in a bench centrifuge is recommended before use.

Purity: Typical purity is better than 95% (HPLC / UV / 290 nm) at time of quality control and packing. However, actual purity depends on storage and transport conditions. The product is not sterile and has not been tested for endotoxins.

Stability and Storage: AA-UTP is most stable when stored as aqueous solution in the freezer (-20° Celsius necessary, -80° recommended), however, at ambient temperature the compound slowly starts to decompose. Thus, in order to maintain its original high quality it is recommended to allow thawing only before using the product. If you will not use up the vial with one application, please aliquot the contents of the vial in order to avoid repeated freeze/thaw cycles for the rest. When making such aliquots be sure to operate quickly and to freeze the vial again as soon as possible.

Toxicity and Safety: Since triphosphates have multiple tasks in every organism, it is very likely that UTP analogues will interfere with many cell regulation processes *in vivo*. However, due to the rather small quantities to work with, no health hazards have been reported. Nevertheless please keep in mind, that the *in vivo* properties of this compound are not sufficiently characterized up to now. Avoid skin contact or ingestion and allow only trained personnel to handle the product.

Our products are designed, developed and sold for research purposes only! They are intended for *in vitro* and nonhuman *in vivo* laboratory applications. Any other use requires approval of health authorities.

Not for drug, household or related uses!
