

Technical Information about 8-Br-TNP-GTP

Update: October 11, 2022 ss

Abbreviation:

8-Br-TNP-GTP

Formula	CAS No.	Molecular Weight	UV	BIOLOG Cat. No.
C ₁₆ H ₁₆ BrN ₈ O ₂₀ P ₃ (for free acid)	[pending]	813.2 (for free acid)	λ_{\max} 408 nm / ϵ 26500 / pH 8	B 153

Name: 8- Bromo- 2', 3'- O- (2, 4, 6- trinitrophenyl)guanosine- 5'- O- triphosphate, sodium salt

Description: 8-Br-TNP-GTP is an analogue of guanosine-5'-O-triphosphate (GTP) in which the hydrogen atom in position 8 of the purine nucleobase has been replaced by bromine. The 2' and 3' hydroxy groups have been modified with a 2,4,6-trinitrophenyl moiety.

Properties: Fluorescent analogue of GTP with λ_{exc} 408 nm and λ_{em} 552 nm, which can substitute for GTP in the interaction with various enzymes and proteins. It is sensitive to indicators of local environment such as polarity and viscosity, and frequently exhibits a spectral shift and fluorescence enhancement upon binding to a protein. Potential inhibitor of various adenylyl isoforms and soluble guanylyl cyclase (sGC).

Specification: Aqueous solution of the sodium salt (10 mM). Other salt forms of 8-Br-TNP-GTP are available upon request. Micromolar quantities are determined by UV at λ_{max} . When opening the tube please make sure that no liquid is lost within the cap. A short spin-down in a bench centrifuge is recommended before use.

Purity: Typical purity is better than 95% (HPLC / UV / 260 nm) at time of quality control and packing. However, actual purity depends on storage and transport conditions. The product is not sterile and has not been tested for endotoxins.

Stability and Storage: 8-Br-TNP-GTP is most stable when stored as aqueous solution in the freezer (-20° Celsius necessary, -70° recommended), however, at ambient temperature the compound slowly starts to decompose. Thus, in order to maintain its original high quality it is recommended to allow thawing only before using the product. If you will not use up the vial with one application, please aliquot the contents of the vial in order to avoid repeated freeze/thaw cycles for the rest. When making such aliquots be sure to operate quickly and to freeze the vial again as soon as possible. Exposure to bright light should be avoided. For stability reasons it is essential that the pH value of the product solution never drops below 7.5 which can be achieved by addition of a suitable buffer.

Toxicity and Safety: Since triphosphates have multiple tasks in every organism, it is very likely that triphosphate analogues will interfere with many cell regulation processes *in vivo*. However, due to the rather small quantities to work with, no health hazards have been reported. Nevertheless, please keep in mind, that the *in vivo* properties of this compound are not sufficiently characterized up to now. Avoid skin contact or ingestion and allow only trained personnel to handle the product.

Our products are designed, developed and sold for research purposes only! They are intended for *in vitro* and nonhuman *in vivo* laboratory applications. Any other use requires approval of health authorities.

Not for drug, household or related uses!

Selected References for 8-Br-TNP-GTP: 8-Br-TNP-GTP is a new product and there are currently no corresponding references available.
