

Technical Information about N⁶- Cyclopentyladenosine- 5'- O- diphosphate (6-cPe-ADP)

Update: October 16, 2018 нп

Abbreviation: 6-cPe-ADP / cpADP

Formula	CAS No.	Molecular Weight	UV	BIOLOG Cat. No.
C ₁₅ H ₂₃ N ₅ O ₁₀ P ₂ for free acid	[681175-79-1]	495.3 for free acid	λ _{max} 270 nm / ε 19900 / pH 7	C 061

Name: N⁶- Cyclopentyladenosine- 5'- O- diphosphate

Description: 6-cPe-ADP is an analogue of adenosine- 5'- O- diphosphate (ADP) in which one hydrogen of the 6- amino group has been substituted by a cyclopentyl moiety.

Properties:

- Precursor of the corresponding radio-labelled triphosphate which can be used for identification of the specific substrates of an engineered protein kinase as described by Shah et al. (1997),
- potent inhibitor of an engineered myosin Vb mutant as well as of the corresponding wild-type myosin (Provance et al. 2004).

Specification: Sodium salt in aqueous solution (10 mM). The free acid or other salt forms are available upon request. Micro molar quantities are determined by UV at λ_{max}.

Purity: Typical analysis is better than 95% (HPLC / UV / 270 nm). The product is not sterile and has not been tested for endotoxins.

Solubility: 6-cPe-ADP has sufficient solubility in water. When opening the tube please make sure that no liquid is lost within the cap. A short spin-down in a bench centrifuge is recommended before use.

Stability and Storage: 6-cPe-ADP is relatively stable when stored frozen in aqueous solution (- 20° celsius necessary, - 80° recommended). In order to maintain its original high quality, it is recommended to allow thawing only before using the product. If you will not use up the vial with one application, please aliquot the content of the vial in order to avoid repeated freeze/thawing cycles for the rest. When making such aliquots be sure to operate quickly and to freeze the vial again as soon as possible.

Toxicity and Safety: Since nucleoside diphosphates have multiple tasks in every organism, it is likely that ADP analogues will interfere with many cell regulation processes *in vivo*. However, due to the rather small quantities to work with, no health hazards have been reported. Nevertheless please keep in mind, that the *in vivo* properties of this compound are not sufficiently characterized up to now. Avoid skin contact or ingestion and allow only trained personnel to handle the product.

Our products are designed, developed and sold for research purposes only! They are intended for *in vitro* and nonhuman *in vivo* laboratory applications. Any other use requires approval of health authorities.

Not for drug, household or related uses!
