

Technical Information about P¹- (5'- [1, N⁶- Ethenoadenosyl])- P⁴- (5'- adenosyl)- tetraphosphate (ε-Ap₄A / ε-AppppA)

Update: November 28, 2018 HGG

Abbreviation: ε-Ap₄A / ε-AppppA

Formula	CAS No.	Molecular Weight	UV	BIOLOG Cat.No.
C ₂₂ H ₂₈ N ₁₀ O ₁₉ P ₄ (free acid)	[97837-60-0]	860.4 (free acid)	λ _{max} 262 nm / ε 18220 / pH 7	E 029

Name: P¹- (5'- [1, N⁶- Ethenoadenosyl])- P⁴- (5'- adenosyl)- tetraphosphate (ε-Ap₄A / ε-AppppA)

Description: ε-Ap₄A is a fluorescent modification of the naturally occurring dinucleoside polyphosphate Ap₄A, where two adenosine moieties are linked via their 5' positions by four phosphate groups. One of the adenine nucleobases has been modified by fluorescent etheno group.

Properties: The etheno group of ε-Ap₄-ε-A fluoresces with λ_{exc} 300 nm and λ_{em} 415 nm.

Specification: Lyophilized or crystallized sodium salt. The free acid or other salt forms are available upon request. Equal concentrations of ε-Ap₄A can appear very different in volume due to sensitivity of the lyophilized form to humidity. The compound can even contract to small volume droplets. Normally the product is located in the conical bottom of the tube. Micromolar quantities are determined by UV at λ_{max}.

Purity: Typical analysis is better than 95% (HPLC / UV / 275 nm). The product is not sterile and has not been tested for endotoxins.

Solubility: ε-Ap₄A has good solubility in water and aqueous buffers (≥ 10 mM, limits have not been determined). Please rinse tube walls carefully and preferably use ultrasonic or vortex to achieve total and uniform mixing. When opening the tube please make sure that no substance is lost within the cap.

Stability and Storage: ε-Ap₄A has sufficient stability at room temperature and does not need special care during handling or shipment. Nevertheless, we recommend that the compound should be protected from light, stored in the freezer, for longer storage periods preferably in freeze-dried form.

Toxicity and Safety: Please keep in mind that the *in vivo* properties of this compound are not sufficiently characterized up to now. Avoid skin contact or ingestion and allow only trained personnel to handle the product. Our products are designed, developed and sold for research purposes only. They are intended for *in vitro* and nonhuman *in vivo* laboratory applications. Any other use requires approval of health authorities.

Not for drug, household or related uses!

P.t.o.
